

# Cloud Security at Scale via DevSecOps

Integrating Security with DevOps

Camil Samaha, AWS Solutions Architecture

# What Is (True) Cloud Computing?

The on-demand delivery of IT resources over public or private networks with zero up-front costs, no long-term contracts, and pay-as-you-go pricing

# AWS Global Infrastructure

# New Business Model

**Focus** on differentiating your company

**Innovate** at start-up like speed

**Reduce** risk

Move Fast

OR

Stay Secure

Move Fast

AND

Stay Secure

# Infrastructure Evolution

## Then

- Big Perimeter
- End-to-End Ownership
- Build it all yourself
- Server-centric approach
- Self-managed Services
- Static Architecture
- De-centralized Administration

## Now

- Micro-Perimeters
- Own just enough
- Focus on your core value
- Service-Centric
- Platform Services
- Continuously Evolving
- **Control Plane API**

# Security Evolution

**Security as code**

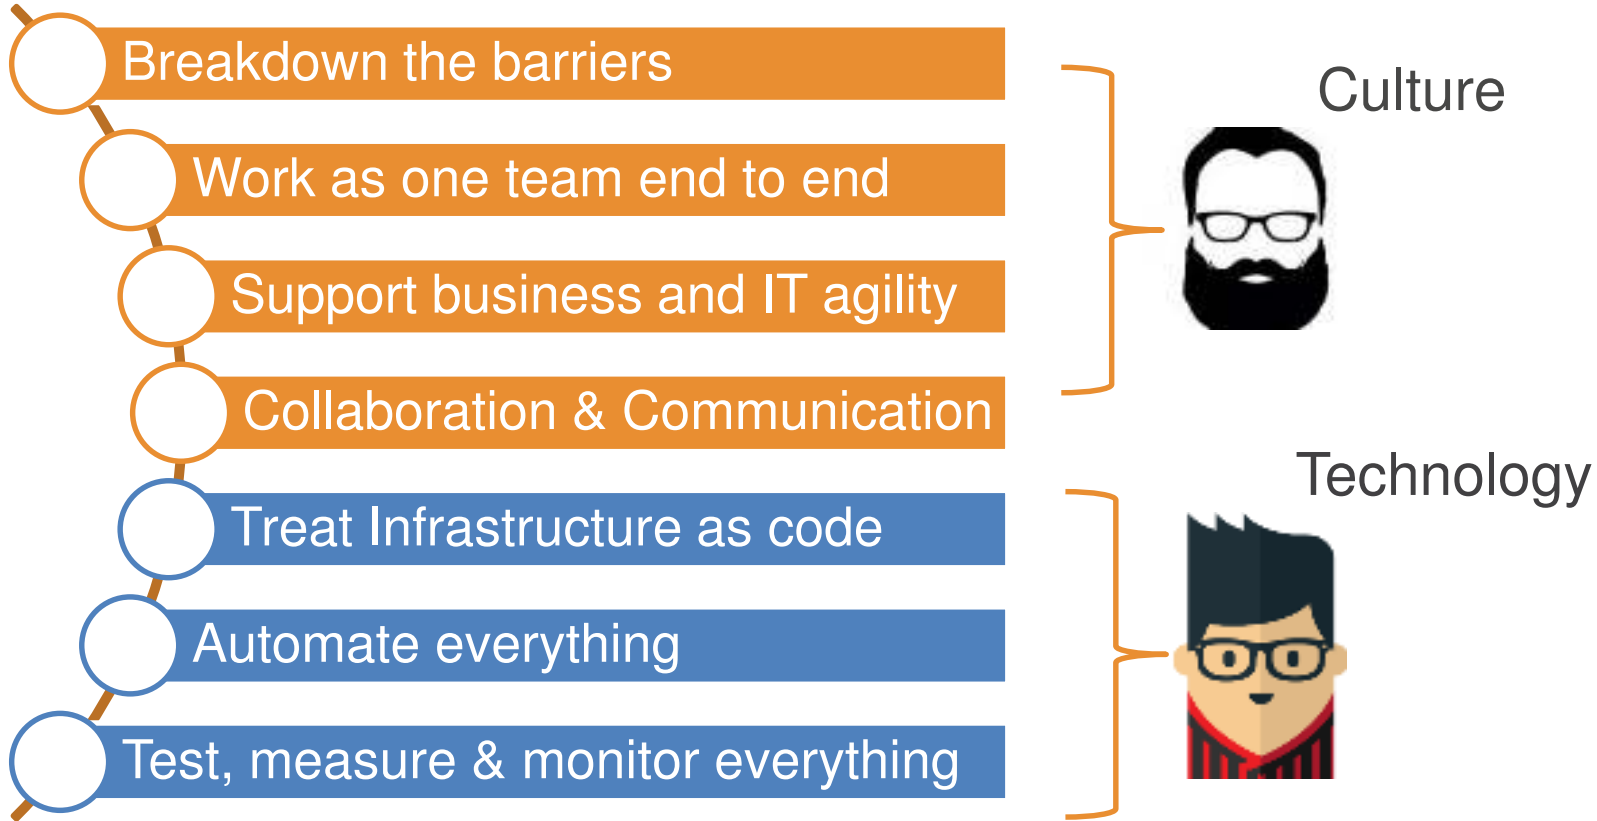

# Security as Code

1. Use the cloud to protect the cloud
2. Security infrastructure should be cloud aware
3. Expose security features as services via **API**
4. **Automate** everything so everything **scales**

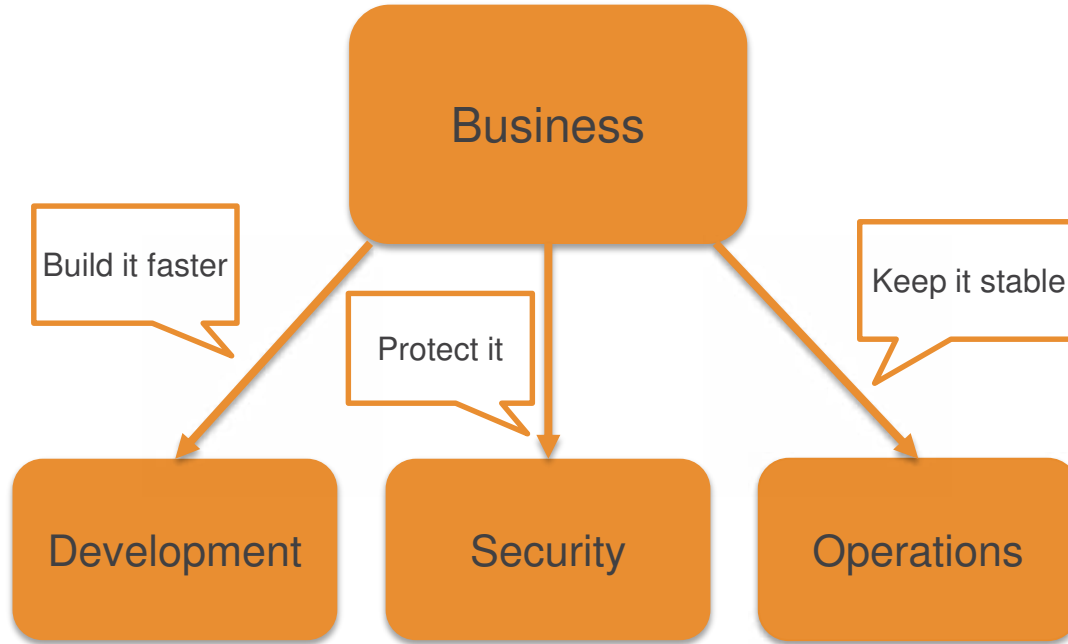

# What is DevOps?

Cultural  
Philosophy + Practices + Tools

# What is DevOps?

# Security as Code: Innovation, Stability & Security

# Security as Code: Deploying More Frequently Lowers Risk

Rare release events:  
“Waterfall methodology”

“Increased risk”

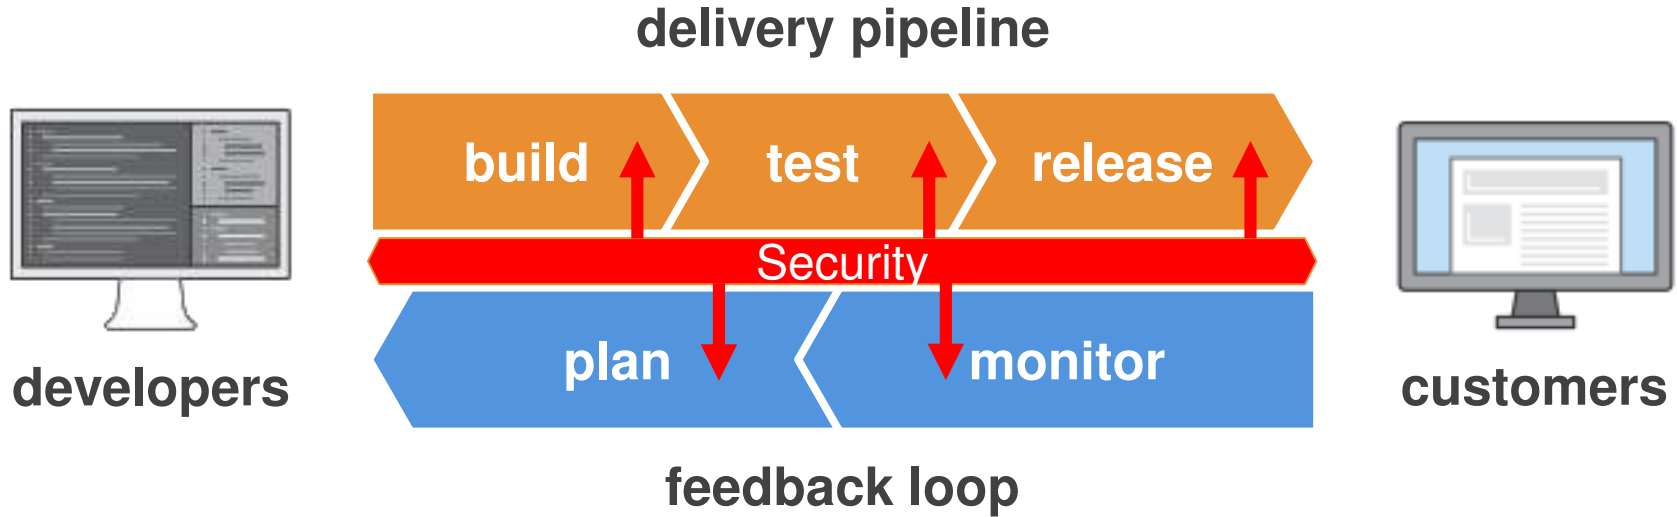

Frequent release events  
“Agile methodology”

“Minimized risk”

# What is DevSecOps?

## Software development lifecycle

**DevOps** = Efficiencies that speed up this lifecycle

**DevSecOps** = Validate building blocks without slowing lifecycle

# Who is DevSecOps?

## DevSecOps is

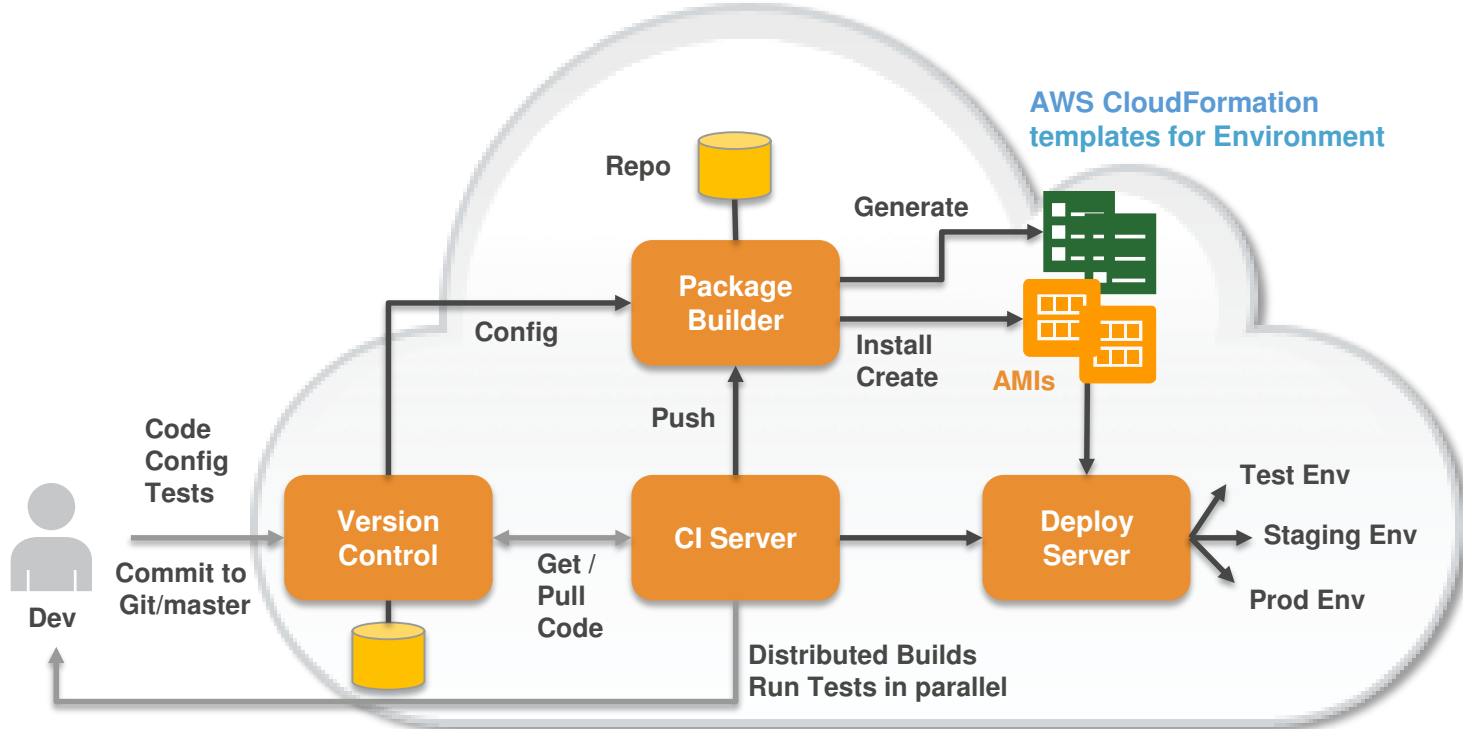

- Team/Community, not a person
- Automated and autonomous security
- Security at scale

## DevSecOps role

- Not there to audit code
- Implement the control segments to validate and audit code and artifacts as part of the CI/CD process

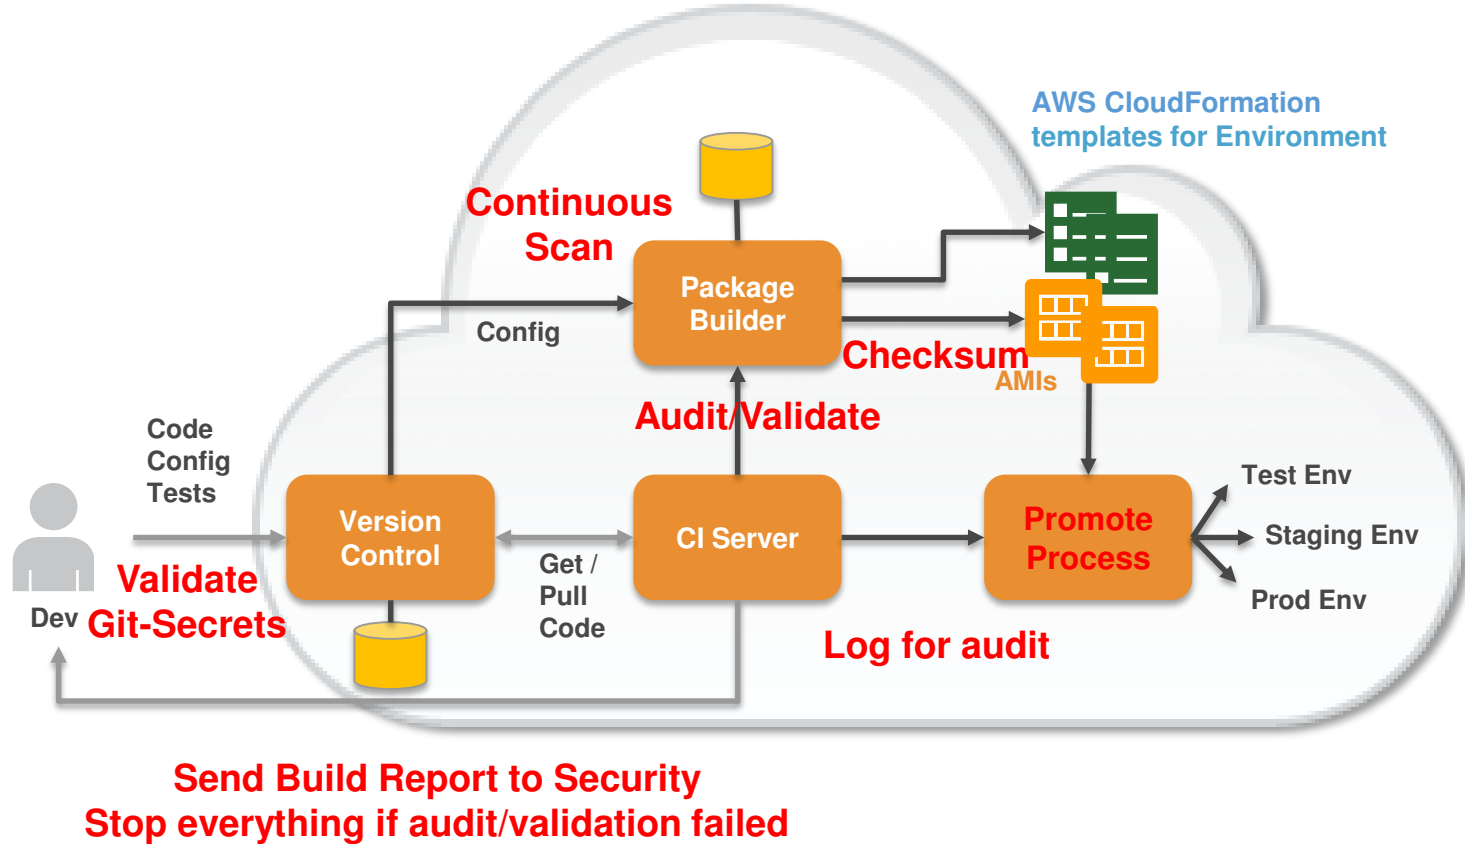

# CI/CD for DevOps

**Send Build Report to Dev**  
**Stop everything if build failed**

# CI/CD for DevSecOps

# Promotion Process in Continuous Deployment

## CONTINUOUS DELIVERY

## CONTINUOUS DEPLOYMENT

# What Does DevSecOps CI/CD Give Us?

- **Confidence** that our code is **validated** against corporate security policies.
- Avoid infrastructure/application failure in a later deployment due to different security configuration
- Match DevOps **pace of innovation**
- Audit and alert
- **Security at scale!**

# AWS CloudFormation primer

Infrastructure is code

# AWS CloudFormation Primer

Allows you to define a “**template**”

- Composed of different “resources”
- Provision that template into repeatable, live, “stacks”.

CloudFormation (CFn) provides a **single service interface**

- Let CFn perform state changes and govern who calls CFn

**Treat as Code**

- Check in your templates

CFn templates can hook into external configuration management frameworks

- Jenkins/Chef/Puppet/etc.

# AWS CloudFormation Primer

# Split Ownership Configurations

Who knows your solution best?

- Dev, Infra, Sec...?
- **Delegate ownership**
  - Infra – VPC design, IGW Deployment, Subnets, etc.
  - DevOps – EC2, Elastic BeanStalk, RDS, DynamoDB, etc.
  - OS Patching, Security Agent Deployments, IAM Roles, etc.

Use Yaml and split file into chunks or functions

- Separate file sources with access control – Use IAM/VPC-E/etc.
- Push files -> **Validate** -> Merge files -> **Validate** -> Deploy -> **Validate**

Jenkins for deployment

- **Promotion flows**
  - Move from manual to Automation based on validation quality
- Excellent for merging jobs of split configurations

# Merging

From single file or multiple files

- Maintain access control using policies
- Use different source stores if needed

Based on function/state

Reusable patterns

Maintain order, especially of validation

- Security validation last to execute
- Security should always win

```
2 baseline: $baseline
3   AWSTemplateFormatVersion: "2010-09-09"
4   Description: "Service Catalog dependencies."
5   Parameters: {}

48         FromPort: 22
```

# Validation

Keep track of what section you are validating

- Stage vs Prod
- Merged vs separated

Validate often and log/alert

- Validate part and end result
- Run-time validation

Use external agents/services

- Amazon Simple WorkFlow
- AWS Lambda
- AWS Config
- Amazon CloudWatch Logs
- Etc.

```
f = File.open("template.json", "rb")
g = f.read
g.gsub(",","\n").each_line {|line|
  if (line.downcase.include? "cidrip") && !line.include?("0.0.0.0")
    cfnCorpCIDRArray.push line[/((([0-9]|[1-9][0-9]|1[0-9]{2}|2[0-4][0-9]|
  elsif (line.downcase.include? "cidrip") && line.include?("0.0.0.0")
    cfnCIDRArray.push line[/((([0-9]|[1-9][0-9]|1[0-9]{2}|2[0-4][0-9]|25[0-
    p errorCIDRSource
    fail = true
  elsif (line.downcase.include?("fromport") && line.include?("0"))
    cfnPortArray.push line[/((([0-9]|[1-9][0-9]|1[0-9]{2}|2[0-4][0-9]|25[0-
    p errorPortSource
    fail = true
  end
}

# Check Corp CIDR blocks
strFail = ""
cfnCorpCIDRArray.each {|y|
  found = false
  corpCIDRArray.each {|x|
    cidr = NetAddr::CIDR.create(x)
    if ((cidr.contains?(y)) || (y = x))
      found = true
    end
  }
}
if !found
  p errorCorpCIDRSource + " #{@y}"
  fail = true
end
}
```

# Where else can this be applied?

AWS CloudFormation

CFn Template

Amazon EC2 Container Service

```
"name": "wordpress",  
"links": [  
  "mysql"  
],

files:  
  source-destination-  
permissions:  
  permissions-specific  
hooks:  
  deployment-lifecycle
```

AppSpec File

...and more.

# Other tools to keep close

## Tracking

- AWS Config Rules (*Preview*)
- Amazon CloudWatch Events
- AWS CloudTrail
- AWS Inspector

## Execution

- AWS Lambda

## Track/Log

- Amazon CloudWatch Logs
- Amazon DynamoDB

## Alert

- Amazon SNS

# Why should I do this?

Implement “Compliance Status” for easy overview

- Use predefined checks
- Create **extended custom** checks
- Fix the iss

**Always Log and Alert!**

Evaluate/remediate changes/events in your account

- **Doesn't replace** log analysis (Machine Learning FTW)
- Protect against changes made by (**un**)authorized accounts
- **Automatic remediation** for critical events
- Do forensics on the fly

**Thank you!**
